

RNA cells

state r + velocity v

Protein cells

different cells, no pairing

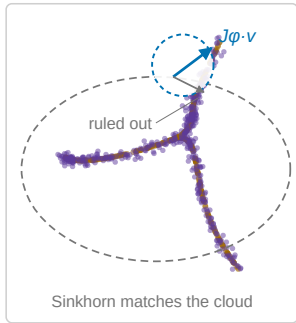

learned map

$\varphi(r)$

Shared protein space

the kinetics term

fixes the direction,
not just the cloud

$$J\varphi \cdot v = \kappa(\alpha \cdot S_r - \beta \cdot \varphi)$$

κ time-scale

α translation rate

β degradation rate

S gene $\rightarrow$ protein map

β is checked against
measured half-lives
